Data Cleaning:

Remove duplicate

In the first step of data cleaning, count of Customer ID is checked in all three data sheets. The customer names sheet and medical examination sheet have the same Customer Ids. But the hospitalisation details data set contains 8 extra Ids.

A	B	C	D	E	F	G	H	I	J
Customer	Imputed customer	year	month	date	children	charges	Hospital tier	City tier	State ID
?	?	2004	Nov		6	0	1137.01 tier - 3	tier - 1	R1013
6	?	1999	Jun		9	1	2775.19 tier - 2	tier - 1	R1012
3	?	1985	Dec		20	2	6203.9 tier - 1	tier - 2	R1012
15	id2444	1987	Nov		27	2	20984.09 tier - 2	tier - 2	R1015
10	id3444	2004	Nov		1	2	34303.17 tier - 1	tier - 3	R1013
11	?	2000	Oct		13	0	35585.58 tier - 1	tier - 2	R1011
10	?	1992	Oct		6	0	36837.47 tier - 1	tier - 2	R1011
14	?	1991	Nov		22	2	38711 tier - 1	tier - 3	R1011
15									

Then the unknown Customer Ids were checked with the “Charges” column. Except the Customer ID all the other data were same in 5 Ids. So we considered that 5 unknown Ids are duplicate. Using the “Remove duplicates” that 5 Ids are removed. But the other 3 Ids are included in the data set.

Data imputation

The number of missing values marked with "?" in each column of the "Medical Examinations" table and "Hospitalization Details" tables are checked by clicking the "?" in the filter.

Customer Id: The missing customer Id is imputed as "Unknown".

A	B	C	D	E	F	G	H
Customer	Date of Birth	Age	children	charge	Hospital tier	City tier	State
Unknown	06-Nov-2004	18	0	1137.01	tier - 3	tier - 1	R1013

Smoker:

In medical examination sheet 2 smoker values are missing.

A	B	C	D	E	F	G	H	I	J
Customer	BMI	HBA1C	Heart Issue	Any Transplan	Cancer histo	NumberOfMajorSurgery	smoke		
Id560	23.98	4.9	No	No	No	No major surgery	?		
Id635	25.175	4.96	No	yes	No		1 ?		

Based on the given instructions the missing values in the 'smoker' was imputed by the most frequently occurring values in the respective columns. Using the functions IF, INDEX, MODE and MATCH the missing values are imputed.

Clipboard Font Alignment Number Formatting Table Styles Format Cells										
fx =IF(H2="?",INDEX(\$H\$2:\$H\$2336,MODE(MATCH(\$H\$2:\$H\$2336,\$H\$2:\$H\$2336,0))),H2)										
	B	C	D	E	F	G	H	I	J	K

12	Id11	Fierro Vargas	Paola	Andrea	
13	Id12	Franz	David		
14	Id13	Foster	Wade		
15	Id14	Tenorio	Franklin		
16	Id15	Rios	Leilani	M.	
17	Id16	Viau-Dupuis	Philippe		
18	Id17	Cronin	Jennifer	A.	
19	Id18	Noordstar	Christina	M.	

The text “no major surgery” in the column "Number of Major Surgeries" in "Medical Examinations" table is replaced by the numerical values 0 using “Find and Replace”

The new column named “Weight Status” was created using given below table and “IFS” function based on BMI values.

BMI	Weight Status
Below 18.5	Underweight
18.5 – 24.9	Normal Weight
25.0 – 29.9	Overweight
30.0 and Above	Obesity

customer ID	BMI	Weight Status	HBA1C	Heart Issues	Any Transplants	Cancer history	NumberOfMajorSurgeries	Smoking
I1	47.41	Obesity	7.47	No	No	No	0	yes
I2	30.36	Obesity	5.77	No	No	No	0	yes
I3	34.485	Obesity	11.87	yes	No	No	2	yes
I4	38.095	Obesity	6.05	No	No	No	0	yes
I5	35.53	Obesity	5.45	No	No	No	0	yes
I6	32.8	Obesity	6.59	No	No	No	0	yes

AI-Driven Data Exploration, Analysis & Visualization:

Data Preparation:

A new sheet named “**Healthcare**” was created using the above three table using the common column “Customer ID”. With the help of XLOOKUP formula the healthcare sheet was created. It contains the following columns, Customer ID, First Name, BMI, HBA1C, Heart Issues, Any Transplants, Cancer History, Number of Major Surgeries, Smoker, Weight Status, Diabetes Status, Date of Birth, Charges, Hospital Tier, City Tier, State ID, and Age. The diabetic status was filled with “**IFS**” function based on the “HBA1C” range given below.

HBA1C	Diabetic status
Normal	Below 5.7
prediabetes	5.7-6.4
Diabetes	Above 6.5

Manual Dashboard

Pivot tables are created manually using the combined healthcare dataset. A donut chart was created based on cancer distibution among smokers Vs non-smokers. The clustered column chart was created based on charges by weight status. Diabetic distribution among the customers

based on various weight and Weight status Vs Average Charges charts are also created. The “Dashboard-Manual” was created in separate sheet and insights are marked in the same sheet.

AI-Powered Summary Statistics & Visualization

The new sheet “Healthcare” was highlighted from other sheets. When we select the healthcare column, the “Quick Analysis” tool was appeared in the sheet. Using the “**Quick analysis**” total customers count, total hospitalisation count, total healthcare costs, average costs and medical metrics are calculated and marked in separate sheet **Quick Analysis**. The recommended charts also added in this sheet.

AI-Dashboard Creation

Using “Claude AI” the “Healthcare Dashboard – AI Analysis” was created in separate sheet.
